

W91473 SERIES

14-MEMORY TONE/PULSE SWITCHABLE DIALER WITH HANDFREE AND LOCK FUNCTIONS

GENERAL DESCRIPTION

The W91473 series are Si-gate CMOS IC tone/pulse switchable dialers containing a 14-channel automatic dialing memory, including a 16-digit \times 3 emergency dialing memory and a 16-digit \times 10 channel repertory memory that provides a 32-digit mercury memory. These dialers also provide flash, clear, hold, lock, and one-key redial functions.

FEATURES

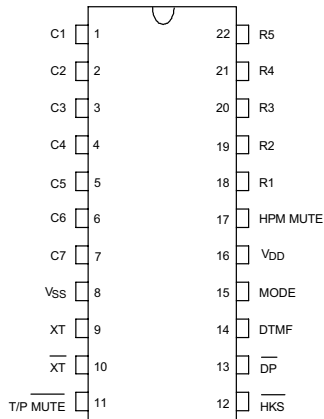

- DTMF/Pulse switchable dialer
- 32-digit LNB (last number buffer) memory
- 32-digit mercury memory
- 16-digit \times 3 one-touch direct repertory memory
- 16-digit \times 10 direct repertory memory
- Uses 7 \times 5 keyboard
- Flash time: 98 mS, 305 mS, or 600 mS (selectable by keypad option)
- Minimum tone output duration: 93 mS
- Minimum intertone pause: 93 mS
- On-chip power-on reset
- Uses 3.579545 MHz crystal or ceramic resonator
- Packaged in 22, 24, or 28-pin plastic DIP
- The different dialers in the W91473 series are shown in the following table:

TYPE NO.	PULSE (ppS)	MEMORY	MERCURY MEMORY	HOLD	HANDFREE	LOCK	PACKAGE

PIN DESCRIPTION

SYMBOL	22-PIN	24-PIN	28-PIN	I/O	FUNCTION
Column-Row Inputs	1-7 & 18-22	1-7 & 20-24	1-8 & 24-28	I	The keyboard input may be used with either the standard 7 × 5 keyboard or an inexpensive single contact (form A) keyboard. Electronic input with μC can also be used. A valid key entry is defined by a single row being connected to a single column.
XT, $\overline{\text{XT}}$	9, 10	9, 10	11, 12	I, O	A built-in inverter provides oscillation with an inexpensive 3.579545 MHz crystal or ceramic resonator.
$\overline{\text{T/P MUTE}}$	11	11	13	O	The $\overline{\text{T/P MUTE}}$ is a conventional CMOS N-channel open drain output. The output transistor is switched on during pulse and tone mode dialing sequence and flash break. Otherwise, it is switched off.
$\overline{\text{DP}}$	13	15	17	O	N-channel open drain dialing pulse output (Figure 1). Flash key causes $\overline{\text{DP}}$ to go active when in pulse mode and tone mode.
MODE	15	17	19	I	Pulling mode pin to V_{SS} places the dialer in tone mode. Pulling mode pin to V_{DD} places the dialer in pulse mode (10 ppS, M/B = 2:3). Leaving mode pin floating places the dialer in pulse mode (10 ppS, M/B = 1:2).
$\overline{\text{HKS}}$	12	14	16	I	Hook switch input. $\overline{\text{HKS}} = 1$: On-hook state. Chip in sleep mode, no operation. $\overline{\text{HKS}} = 0$: Off-hook state. Chip enabled for normal operation. $\overline{\text{HKS}}$ pin is pulled to V_{DD} by internal resistor.

W91473 SERIES

Pin Description, continued

SYMBOL	22-PIN	24-PIN	28-PIN	I/O	FUNCTION																																				
HPM MUTE	17 (only for W91473/D)	19 (only for W91473A)	23	O	The HPM MUTE is a conventional inverter output. During pulse dialing, flash, hold, and mercury mute functions, this pin will output an active high. It remains in a low state at all other times.																																				
NC	-	-	8, 22 (W91473 B/C)	-	No connection.																																				
$\overline{\text{LOCK}}$	17 (W91473L /DL)	19 (W91473 AL)	22 (W91473 BL/CL)	I	The function of the $\overline{\text{LOCK}}$ pin is shown below: <table border="1" data-bbox="899 802 1312 945"> <thead> <tr> <th>LOCK PIN</th> <th>FUNCTION</th> </tr> </thead> <tbody> <tr> <td>V_{DD}</td> <td>"0," " 9" dialing inhibited</td> </tr> <tr> <td>Floating</td> <td>Normal dialing</td> </tr> <tr> <td>V_{SS}</td> <td>"0" dialing inhibited</td> </tr> </tbody> </table>	LOCK PIN	FUNCTION	V _{DD}	"0," " 9" dialing inhibited	Floating	Normal dialing	V _{SS}	"0" dialing inhibited

BLOCK DIAGRAM

FUNCTIONAL DESCRIPTION

Keyboard Operation

C1	C2	C3	C4	C5	C6	C7	
1	2	3	S	M00	M05	EM1	R1
4	5	6		M01	M06	EM2	R2
7	8	9	CLR	M02	M07	EM3	R3
*/T	0	#	R/P	M03	M08	H	R4
F1	F2	F3	R	M04	M09	*MER	R5

Note: *MER location in W91473C/CL or W91473D/DL is SAVE memory.

- S: Store function key

- F1, F2, F3: Flash keys
- R: One-key redial
- H: Hold function key
- M0j: Direct repertory memory
- EMi: One-touch memory for emergency call
- */T: * & P→T
- CLR: Clear key
- R/P: Redial and pause function key
- MER: One-touch memory for mercury code dialing

Note: Dn = 0 to 9, *, #, M0j = M00 to M09 (j = 0 to 9).

Normal Dialing

OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), D1, D2, ..., Dn

1. D1, D2, ..., Dn will be dialed out.
2. Dialing length is unlimited, but redial is inhibited if length oversteps 32 digits.

Redialing

1. OFF HOOK, D1, D2, ..., Dn BUSY, Come ON HOOK, OFF HOOK
 (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), R/P
 or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$, D1, D2, ..., Dn BUSY, $\overline{\text{HFI}} \overline{\text{i}} \perp$ Come
 $\overline{\text{HFI}} \overline{\text{i}} \perp$, R/P

The R/P key can execute redial function only as first key-in after off-hook. Otherwise, it will execute pause function.

2. OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), D1, D2, ..., Dn, R
 - a. The one-key redial function timing diagram is shown in Figure 4.
 - b. If dialing D1 to Dn is completed, pressing the R key will cause the pulse output pin of R to go low for 2.2 seconds. Break time and a 600 mS pause will automatically be added.
 - c. If the R key is pressed before the pulses for the number dialed out are completed, it will be ignored.

Number Store

1. **OFF HOOK** (or **ON HOOK** & $\overline{\text{HFI}} \overline{\text{i}} \overline{\text{j}}$), **S** , **D1** , **D2** , ..., **Dn**
S , **Moj** (or **EMi** or **MER**)

D1, D2, ..., Dn will be stored in memory location but will not be dialed out.

R/P and ***T** keys can be stored as a digit in memory. In store mode, **R/P** is the pause function key.

The store mode can be released after the store function is executed or the state of the hook switch is changed.

2. **S** , **D1** , **D2** , ..., **Dn** , **S** , **0** , **j**

D1, D2, ..., Dn will be stored in memory location M0j and will not be dialed out.

3. **OFFHOOK** (or **ON HOOK** & $\overline{\text{HFI}} \overline{\text{i}} \overline{\text{j}}$), **D1** , **D2** , ..., **Dn** , **S** ,
S , **Mn**

a. D1, D2, ..., Dn will be stored in memory location and will be dialed out.

b. The **S** key must be pressed after completion of the dialing sequence.

4. **D1** , **D2** , ..., **Dn** , **S** , **S** , **0** , **j**

D1, D2, ..., Dn will be stored in memory location M0j and will be dialed out.

Repertory Dialing

- OFF HOOK** (or **ON HOOK** & $\overline{\text{HFI}} \overline{\text{i}} \overline{\text{j}}$), **Moj** (or **EMi** or **MER**)

Access Pause

- OFF HOOK** (or **ON HOOK** & $\overline{\text{HFI}} \overline{\text{i}} \overline{\text{j}}$), **D1** , **D2** , **R/P** , **D3** , ..., **Dn**

1. The pause function can be stored in memory.

2. The pause function is executed in normal dialing, redialing, or memory dialing.

3. The pause function timing diagram is shown in Figure 5.

Pulse-to-Tone (* / T)

OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), D1, D2, ..., Dn, * / T, D1', D2', ..., Dn'

1. If the mode switch is set to pulse mode, then the output signal will be:

D1, D2, ..., Dn, Pause (3.6s), D1', D2', ..., Dn'
(Pulse) (Tone)

2. If the mode switch is set to tone mode, then the output signal will be:

D1, D2, ..., Dn, *, D1', D2', ..., Dn'
(Tone) (Tone) (Tone)

3. The dialer remains in tone mode when the digits have been dialed out and can be reset to pulse mode only by going on-hook.

4. The P→T function timing diagram is shown in Figure 6.

5. * / T key cannot be stored as a digit in memory.

Save

1. OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), S, D1, D2, ..., Dn, S, SAVE

D1, D2, ..., Dn, will be stored in SAVE memory but will not be dialed out.

2. OFFHOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), D1, D2, ..., Dn, S, S, SAVE

D1, D2, ..., Dn, will be stored in SAVE memory and will be dialed out.

3. OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), SAVE

The content of SAVE memory will be dialed out.

Flash (F = F1, F2, F3)

OFF HOOK (or ON HOOK & $\overline{\text{HFI}} \overline{\text{i}} \perp$), F

1. Flash key cannot be stored as a digit in memory and it has first priority among keyboard functions.

2. The system will return to the initial state after the break time is finished.

3. The flash function timing diagram is shown in Figure 7.

Clear key

1. , (or)
Redial and one-key redial buffer will be cleared.
2. ,
Location M0j buffer content will be cleared.
3. , ,
Location M0j buffer content will be cleared.

CHAIN DIALING

Relationship between the memory and the chain dialing buffer:

The chain dialing buffer may be divided into four sections, allowing up to four numbers to be dialed out in sequence. For example, if the user enters M01, M03, EM1, and normal dialing (manual dialing), the content of sections 1 to 4 will be M01, M03, EM1, and normal dialing (manual dialing). When numbers are entered into the chain dialing buffer, there is no need to wait until the previous dialing sequence has been completed. Numbers may be entered directly, one after the other, even while previous numbers are being dialed out.

1. i
Redial buffer content = Manual dialing + Repertory dialing.
2. i
Redial buffer content = Repertory dialing + Manual dialing.
3. i
Redial buffer content = Repertory dialing + Repertory dialing.
4. i
Redial buffer content = Redialing + Manual dialing.

W91473 SERIES

The primary redial content may not be manual dialing. Otherwise, the last redial content will be overwritten.

5. i ~

Redial buffer content = Redialing + Repertory dialing.

Redialing is valid only as the first key-in after off-hook or after the handfree dialing function is toggled on.

The second sequence should not be performed until the first sequence is completely dialed out.

6. i ~

Redial buffer content = Manual dialing.

The one-key redial may only be used after dialing out of a manual dialing sequence is completed.

7. i ~ i ~

i ~

or

i ~ i ~

, , ,

M1 and M2 represent any of the repertory dialing memories.

The first redialing will dial out M1; the second will dial out M1, M2.

If dialing out of the repertory dialing memories has not been completed, the one-key redial key will be ignored.

Dialing of the second repertory dialing memory (M2) should not be performed until the one-key redialing operation is completed.

Notes:

Chain dialing (cascaded dialing) allows for memory or manual dialing while a previous dialing sequence is still being dialed out. More than one sequence of manual dialing is not permitted. Entering more than one manual dialing sequence will inhibit redialing. Chain dialing of more than four sections is not permitted.

i ~ i ~ (two sections of manual dialing)

If more than four sections are entered, all sections after the fourth section will be ignored and redialing will be inhibited.

i ~ i ~ i ~ i ~ (over 4 sections, ignore

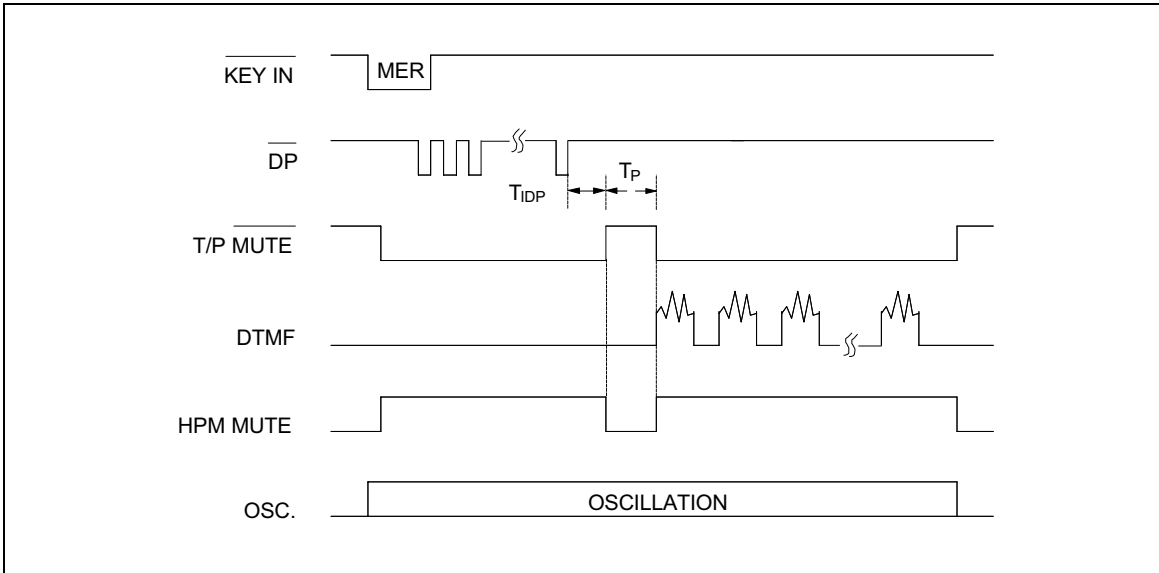

and inhibit redial)

There is a 2.0 sec. inter-chain dialing pause for cascaded dialing.

MERCURY DIALING

1. Up to 32 digits may be stored.
2. Mercury dialing is activated only as the first key-in after off-hook or handfree dialing is activated.
3. The timing diagram for the mercury memory function is given below.

Mercury Function Timing Diagram

ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATING	UNIT
DC Supply Voltage	$V_{DD}-V_{SS}$	-0.3 to +7.0	V
Input/Output Voltage	V_{IL}	$V_{SS}-0.3$	V
	V_{IH}	$V_{DD}+0.3$	V
